Criterion E: Evaluation

Response to each Success Criterion: (Consultation in Appendix)

|	Success criterion (comments by Client in blue)
1	**User login**
	- The app launched the login page immediately. - The aesthetic of the login page is great, very user-friendly - When given the wrong email and password, an incorrect email/password sign appeared
2	**User signup**
	- The signup page is easy to use, and similar aesthetics as the login page - I am able to give an admin key - Password is hidden as I type
3	**Users can switch between windows:**
	- The icons at the bottom of the page is easy to use, and I can easily flip back between windows - Top and bottom bars are designed with the latest Bob colours and logo – a little too much going on though
4	**Users can update schedule information:**
	- The schedule updater is very efficient and the schedule is correctly inputted into the database so the lineup of performers is accurate
5	**App can select a winner**
	- App chooses a random user as a winner. - The randomiser chooses from a student but it doesn't delete the already used raffle tickets
6	**Users can have raffle numbers**
	- Users have stored raffle numbers so it's easy to retrieve first and last name.
7	**Users can vote**
	- Users can choose easily from a dropdown menu of bands and vocals. - The app tells me whether i've placed a vote already or not.

Recommendations:

1. Fix layout

a. It would be great to have photos of the performers so for bands, it would be easier to know who is part of the band
b. Maybe a list of band members would be useful too
c. Some of the alignment should be fixed
2. Add map of the venue
a. I realised that our new venue layout made it more difficult to find the venue
3. Voting
a. At the end of voting period, the user should be able to see who they voted for and maybe take out the drop down menus.

Based on the feedback I received, to further develop my application, I should focus on the layout of the application. While aspects of my app worked well, it was clear that the GUI was not polished. Furthermore, aspects of my logic tier should be fixed. The status of the raffle did not update properly, small debugging was needed.

Overall, my app delivered the functions of the application my client wanted, however, there were clear signs of improvement before this app can be released to the BoB committee members.
